Consultant Orthodontist, Dept. of Orthodontic & Craniofacial Dentistry, Chang-Gung Memorial Hospital, Taipei, Taiwan
Secretary General, Taiwan Academy of Aesthetic Dentistry
Director, Dr. James Lin & Associates' Orthodontic & Implant Center.

TITLE

INTERDISCIPLINARY AND TADS APPROACH IN SHORT FACE PARTLY EDENTULOUS ADULTS.

ABSTRACT

For short face adult patients, they usually present with square facial type, short lower anterior facial height (LAFH), adequate/insufficient smile and intact/partial edentulous dentition.
Due to current lay person's expectation for orthodontic therapy is more than just straighten teeth, we, as professional orthodontists, what services can we provide for those short face patients to fit their desires?
This presentation will encompass orthodontics, periodontics, restorative and implant dentistry plus TADs focusing on current interdisciplinary treatment philosophies and methodologies for management of short face patients who lost their teeth and /or have insufficient smile problems.
Equal emphasis will be placed on the correct ratio of upper anterior clinical crown length/width, causes & treatment strategies of insufficient smile as well as esthetic crown lengthening procedure to achieve optimal facial, smile and pink/white esthetics.
